

On the electronic modules of VAG Group the Diagnostic works in "autodetect mode":
each system if recognized will be available the function of adapting and coding, if not the
user will proceed in the diagnosis without this option.

Are available in both the condition reading errors, parameters and check components
(check components must be supported from the module).

Newest protocol from 2009 is in development and will be available soon.

Legend

PAR = Parameters

ATT = Check components

COD = Adapting and coding

DIAG = Available for diagnosis

■ = supported function

A = Auto detected/recognized function
